

U Let's Learn about Mealworms! S

Draw a picture of your Mealworm:

What does your mealworm look like?

How many legs does the mealworm have?

Does it move quickly or slowly?

Place different foods in various corners of a container. Where do the mealworms go?

What happens when you gently touch the mealworm's antennae with a toothpick?

What happens when you shine a flashlight on your mealworm so that half the mealworm is in the beam?

Place a book on the table and place the mealworm at the edge. What does it do?

Aim a straw at the mealworm's head. Blow gently. What does it do?

Place your mealworm between a wet paper towel and a dry paper towel. What does it do? Where does it go?

Hold a Q-tip with peppermint extract in front of your mealworm. What does it do? Try other scents. What does it do?

What do mealworms like to eat?

We placed a sliced apple, ground oatmeal, rice and raisins in a container. Most of the mealworms wound up in the ground oatmeal.

Wet or Dry Conditions:

We placed a wet paper towel and a dry paper towel in a container. Most of the mealworms actually wound up under the dry paper towel. Maybe this says more about light/dark!

Wet Food-Damp Food:

On a similar vein we placed an apple on top of ground oatmeal and had plain oatmeal in another corn. The majority of mealworms wound up in the plain oatmeal.

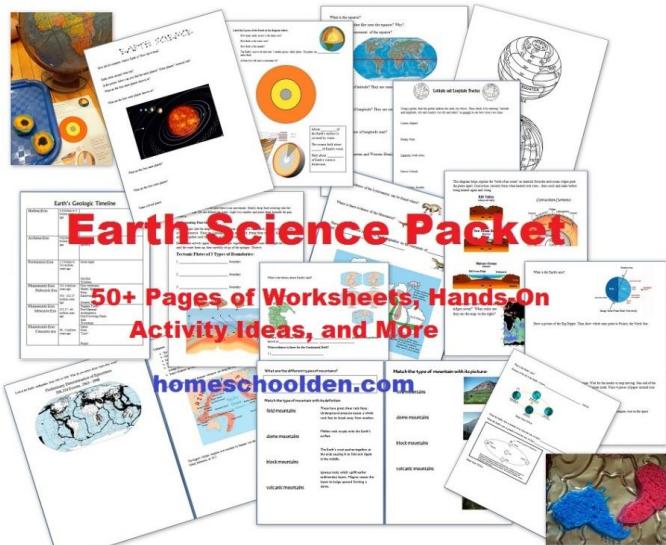

How do mealworms react when you lightly touch their antenna with a toothpick?
