

# Ocean Animal Math Game for Preschoolers

- \*Print out and cut out all of the ocean animal cards. You probably need two copies.
- \*Create a spinner out of the odd, even, less, more circle.
- \*Print out and cut out the game board (ocean scene).
- \*Take a wooden cube and put numbers on each side -- for example the numbers 10 through 15. I usually have two dice and each player chooses one. One die has low numbers (1-6) and the other has higher numbers.

## To Play:

Player 1 rolls the die. He/she takes that number of ocean animals and places it on his/her game board.

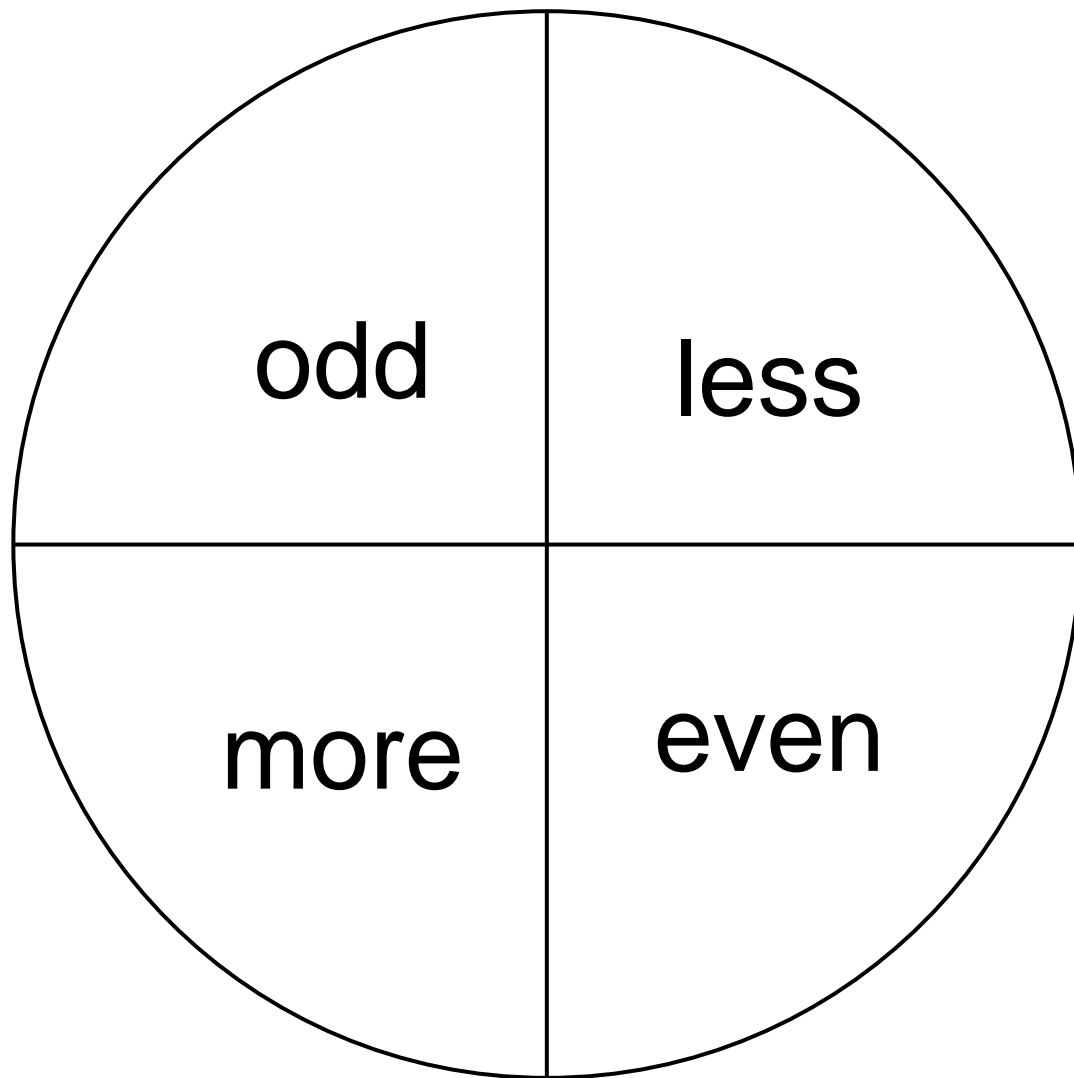

Player 2 rolls the die and takes that number of ocean animals to place on his/her game board.

One player spins the spinner to determine the winner -- the one who has less, more, odd or even. You may have two winners!

## Another game:

You can print out the ocean animals page, but don't cut it up. Each player takes a turn rolling the die and covers up that number of ocean animals. The first person to cover all his/her animals wins the game.

## Gameboard

Each player gets one ocean scene.
