Quick Christmas Cross-Off

You need the number cards 0 through 9 from five or six different decks. Print off one of the game boards (there's a large one on the following page or 2 small ones on page 15.)

Each player chooses a different color marker. On the first player's turn, she takes 2 cards and put them together in any order and cross of that number combination. (A player with the number 3 and 4 cards could cross off either 34, 43 or 3 and 4). The first player to connect 5 boxes in a row wins!

Quick Christmas Cross-Off									
1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20

Great Grid Game

For this game you need cards from 1-6 and two markers of different colors. The first player selects two cards. Create a grid with those numbers. For example, if a player gets a 2 and 6 she marks out a grid like the green example below. If the next player gets two 3s, she would mark out the grid like the red example below.

Continue playing until the board is covered and/or no more grids can be colored. You can print out the large game board on the page that follows or two smaller game boards on page 7.

The Great Grid Game

You will find Christmas Math Number Cards for these activities over at my blog, the [Homeschool Den](http://www.homeschool-den.com).
