## How to Use Math Grids with your Preschooler:

- Print 2 Grid Boards per player
- Gather two different sets of tokens and one die.
- **For Younger Kids:** Take turns rolling the die and covering that number of apples with your tokens. This helps kids develop one-to-one correspondence.
- **For Older Kids:** You can print out the grid boards with 48 apples. Then use two dice, add them together and cover that number of spaces.
- **Three-in-a-Row Game:** Using two sets of tokens, each player takes a turn placing a token down. The object is to get three (or five, if you are using the larger board) tokens in a row. The first player to get three (or five) in a row wins the round.
