Lapbook pieces.

Print the pictures out. Cut on the solid lines. Fold along the dotted lines.

Cut the descriptions out along the dotted line. Glue into the inside of the lapbook pieces (or write in your own descriptions).

Matching page:

Trace the word and match it with the picture.

What are these animals?

Name: _____

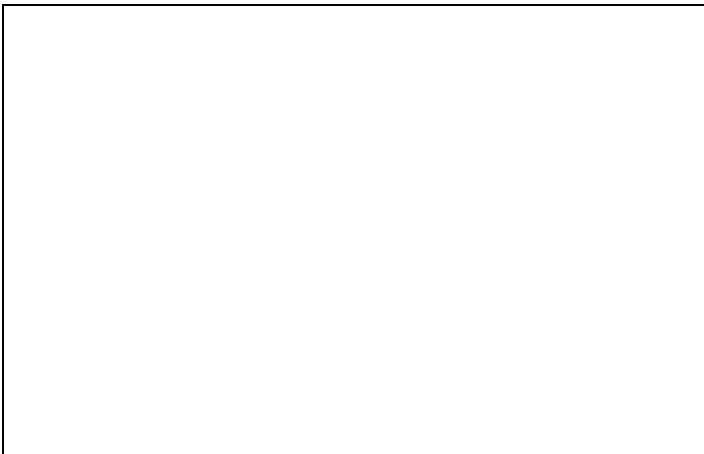

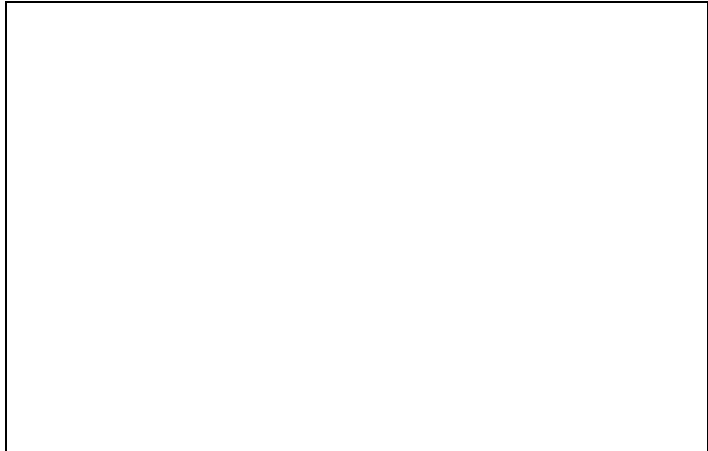

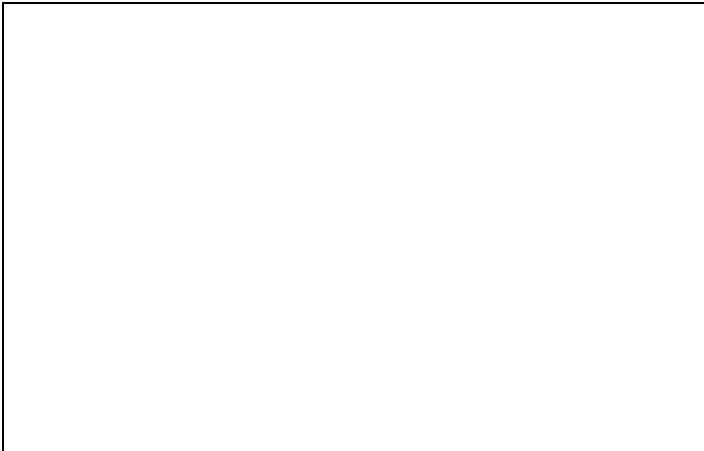

Moles live under the ground. They have powerful forelimbs with paws for digging. They eat earthworms, grubs and small nuts.

Rabbits live in groups in underground burrows. A group of burrows is called a warren. Rabbits eat grass and leafy weeds.

Hedgehogs live Europe, Asia, Africa and New Zealand. They eat insects, grubs, small mammals, birds' eggs, berries, melons, roots and fruits.

Owls are nocturnal animals. They hunt small mammals, insects, frogs, lizards, and a few species hunt fish. They are found all over the world except Antarctica.

Badgers have short, fat bodies with short legs for digging. They live in Europe, Asia, Africa and parts of North America. They eat earthworms, insects, grubs, small mammals, birds' eggs, roots and fruit

Fox are omnivorous animals. They eat small mammals, birds, reptiles, frogs, eggs, insects, worms, fish, crabs, fruits, berries, vegetables, and seeds. In the wild they usually live for about three years (though some may live up to 10 years).

Bear are diurnal, they are usually active during the day, though some may be active at night. Bears usually eat more plants than animals, but will eat whatever is available: roots, berries, meat, fish, insects, larvae, and plants.

Meadow mice are primarily nocturnal animals. They build intricate burrows. They eat grain and seeds from plants, grass and berries. They will also eat insects and larvae.

Name: _____

Trace the words below. Then match the animal with its picture.

mole

rabbit

hedgehog

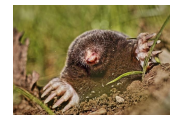

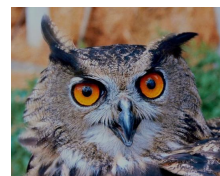

owl

badger

fox

bear

meadow mouse

Name: _____

Find out about these animals and write what you learned in the space below.

mole

rabbit

hedgehog

owl

badger

fox

bear

meadow mouse
